

Infotrix – Cloud AWS Internship

TASK 1

Name : Abirami j

PREREQUISITES:

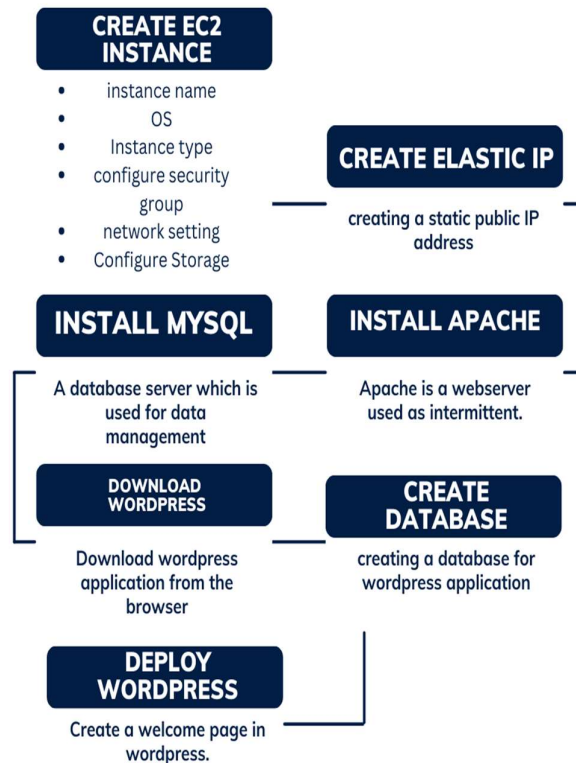

To create a free-tier AWS account

TASK STATEMENT:

- ❖ Deploy application in monolithic and microservices architecture
- ❖ Description:
 - For monolithic: 1 EC2 instance, deploy wordpress and MYSQL on the same instances
 - For microservices: 2 EC2 instance, 1 for wordpress and 1 for MYSQL
 - Configure the necessary security group for the instances
 - EC2 instance type: t2-micro, AML: ubuntu-*
- ❖ Create a welcome page in wordpress that will be the homepage

TASK FLOW

DEPLOYMENT OF WORDPRESS

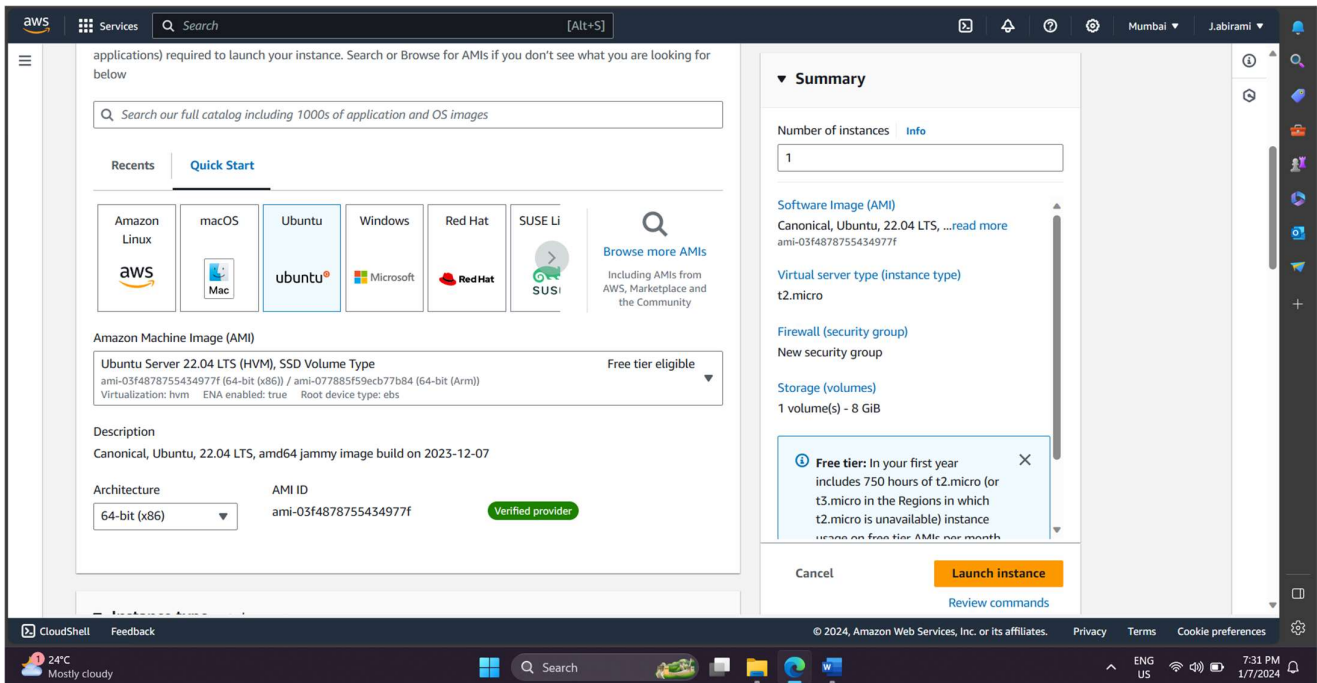

Monolithic Architecture:

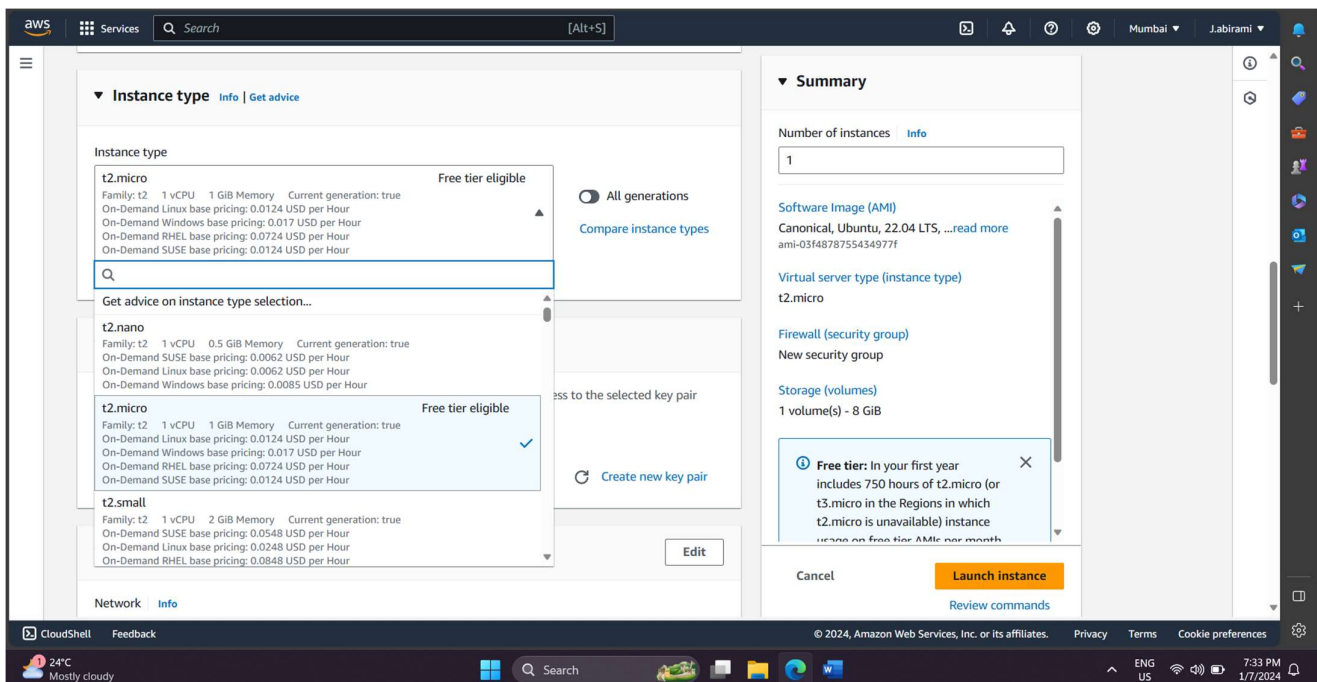

1. Create 1 EC2 instance

1.1 Assign instance name – Wordpress

1.2 Assign AMI – Ubuntu

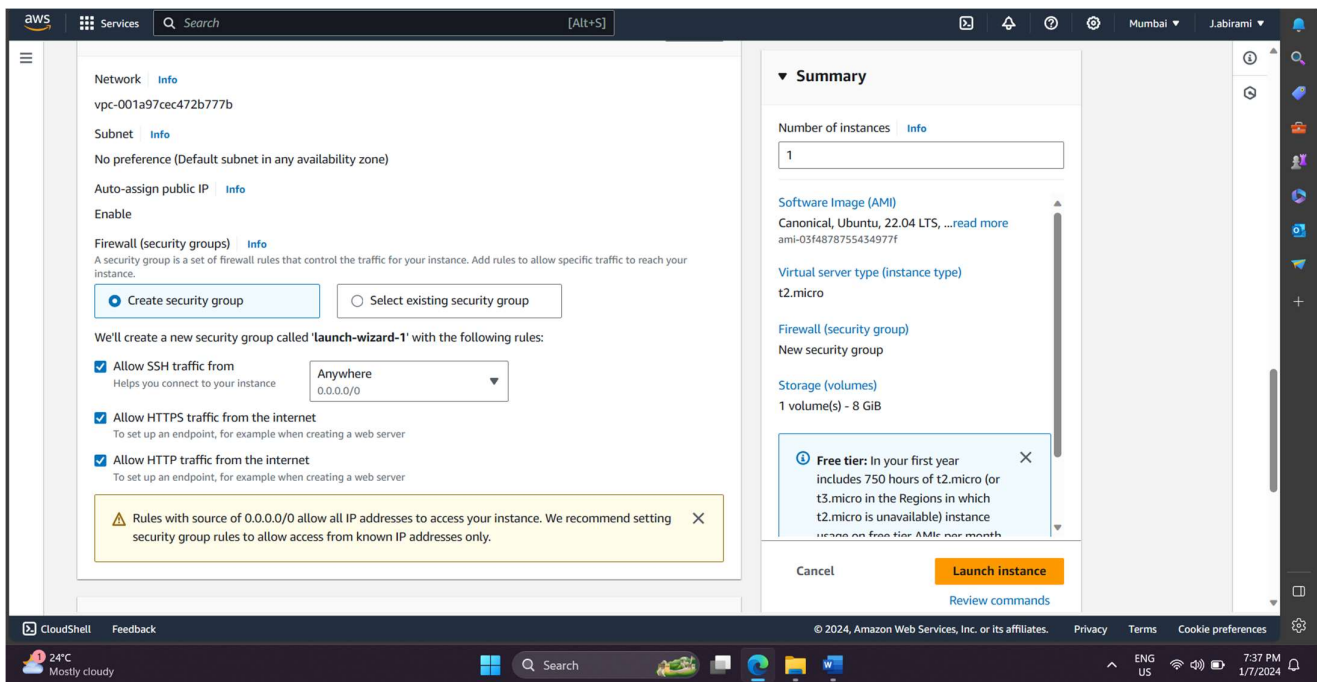

1.3. Assign EC2 instance type – t2.micro

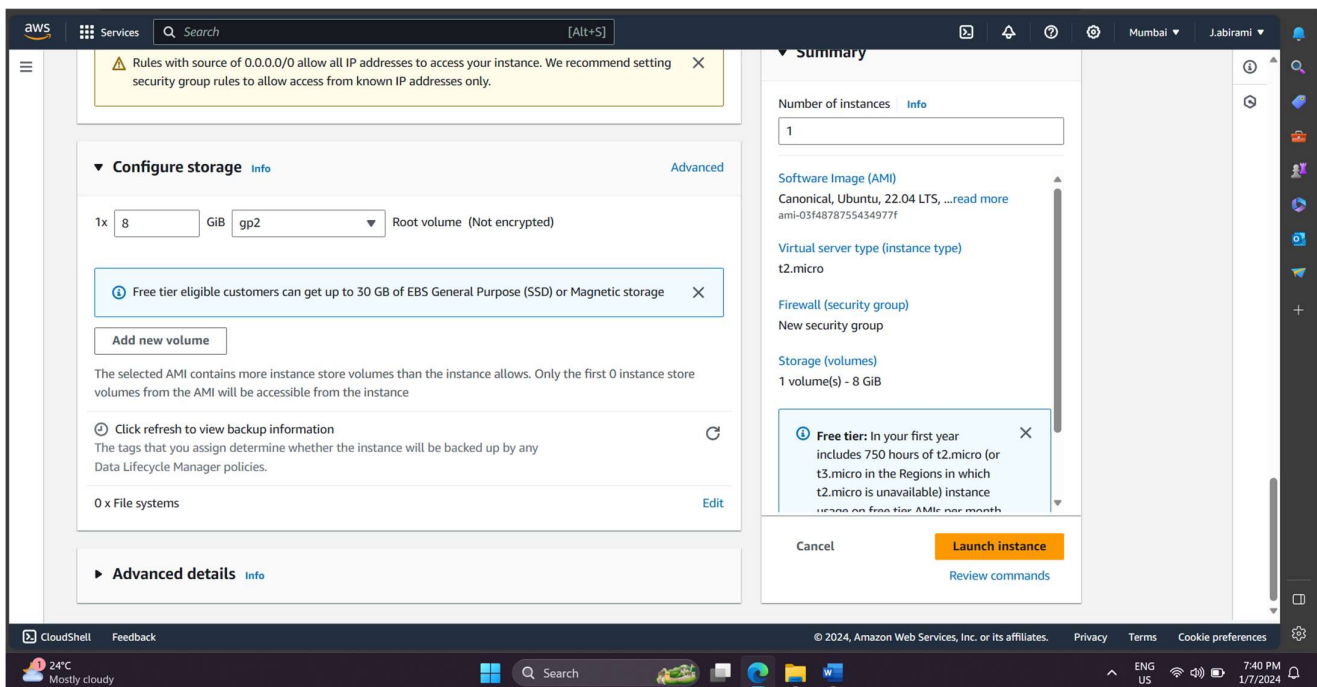

1.4. Configure Security Group

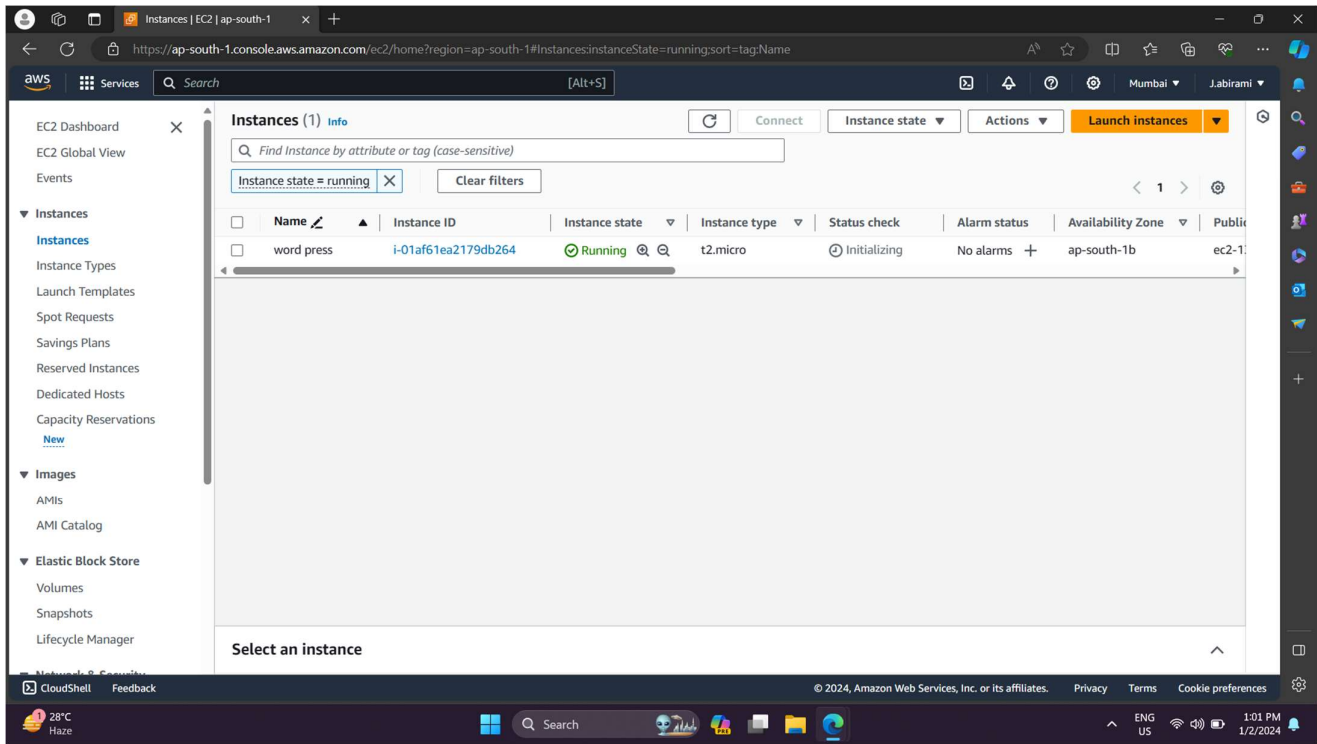

Configuring Security Group which allows basic protocols like SSH, HTTP, HTTPS.

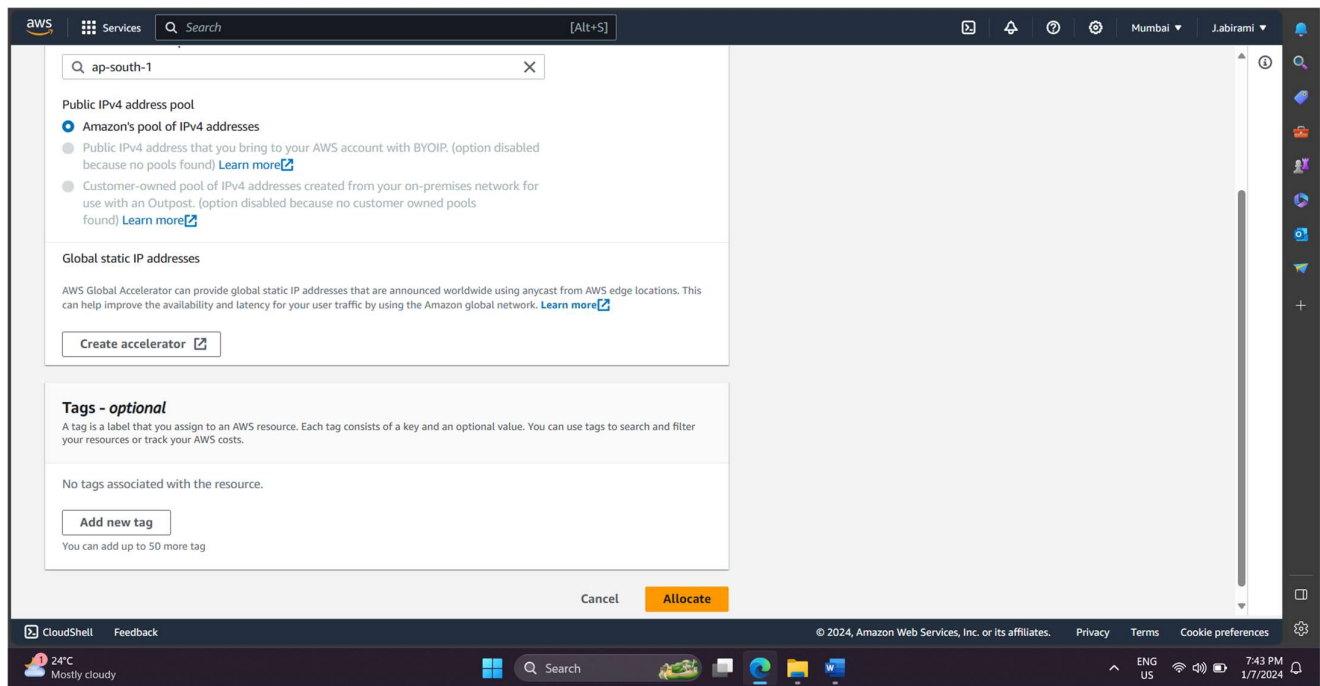

1.5. Configure Network setting and Storage as default

1.6. Launch Instance

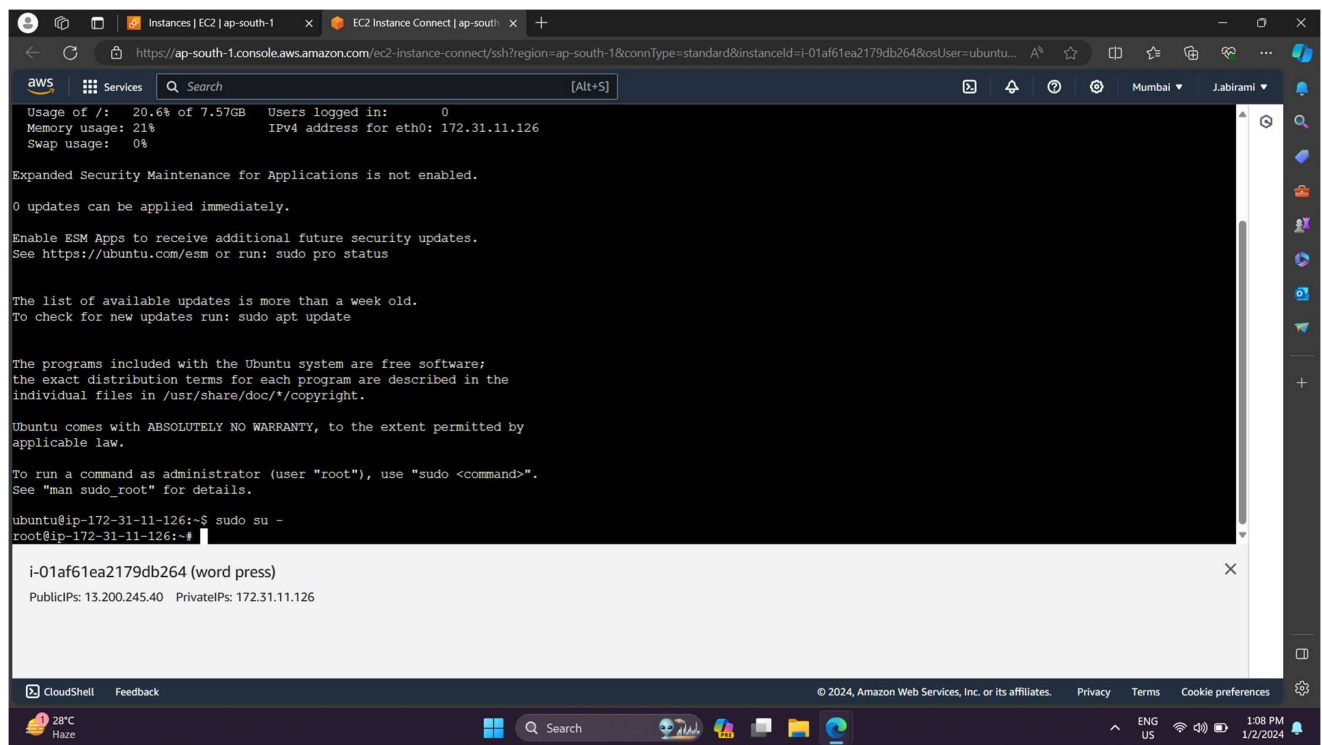

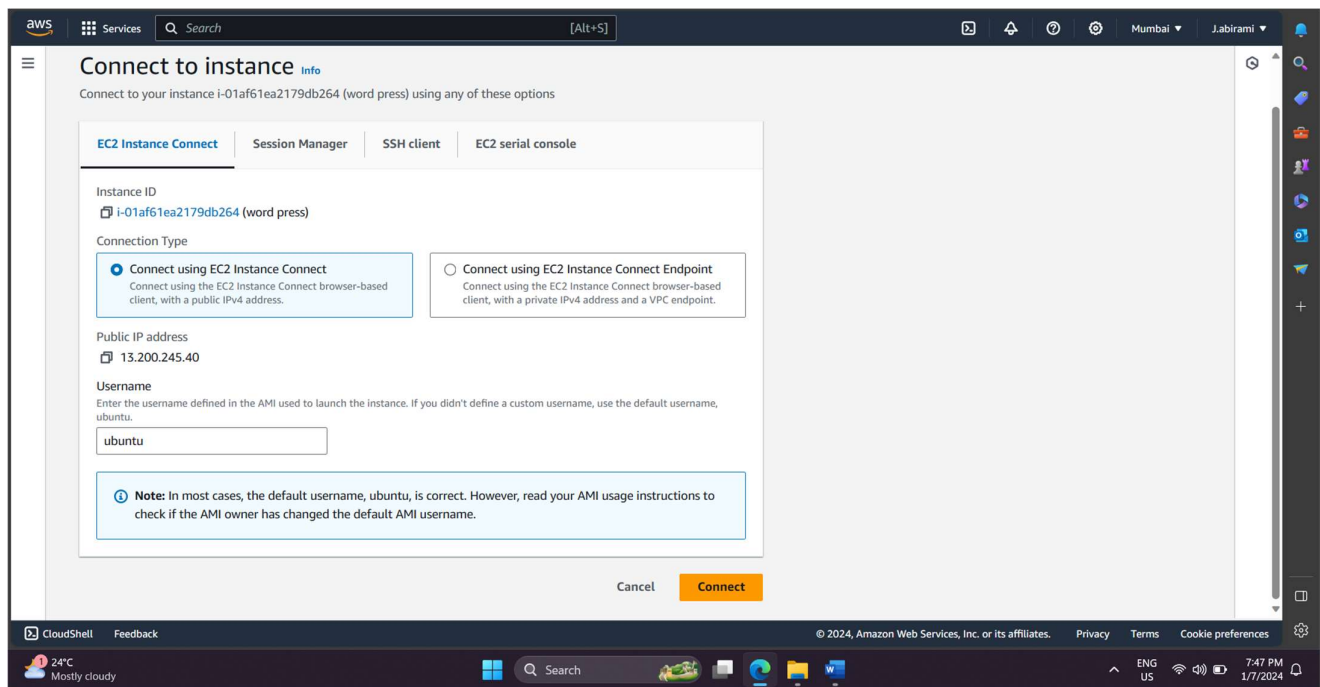

2. Create and assign Elastic IP to Wordpress instance

By using an Elastic IP address, you can mask the failure of an instance or software by rapidly remapping the address to another instance in your account.

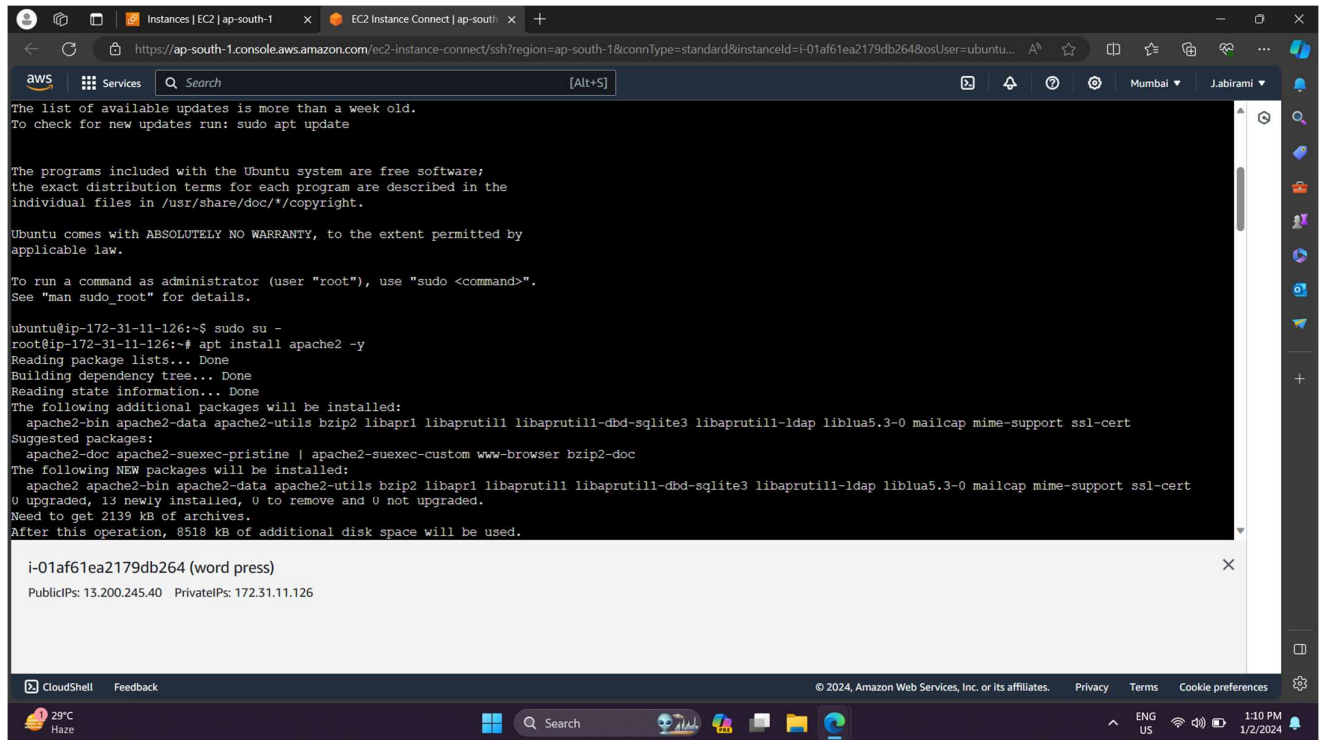

3. Connect to the instance:

4. Install Apache:

Code: `apt install apache2 -y`

Systemctl status apache2

```
aws

The list of available updates is more than a week old.
To check for new updates run: sudo apt update

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

Code: Create database wordpress;

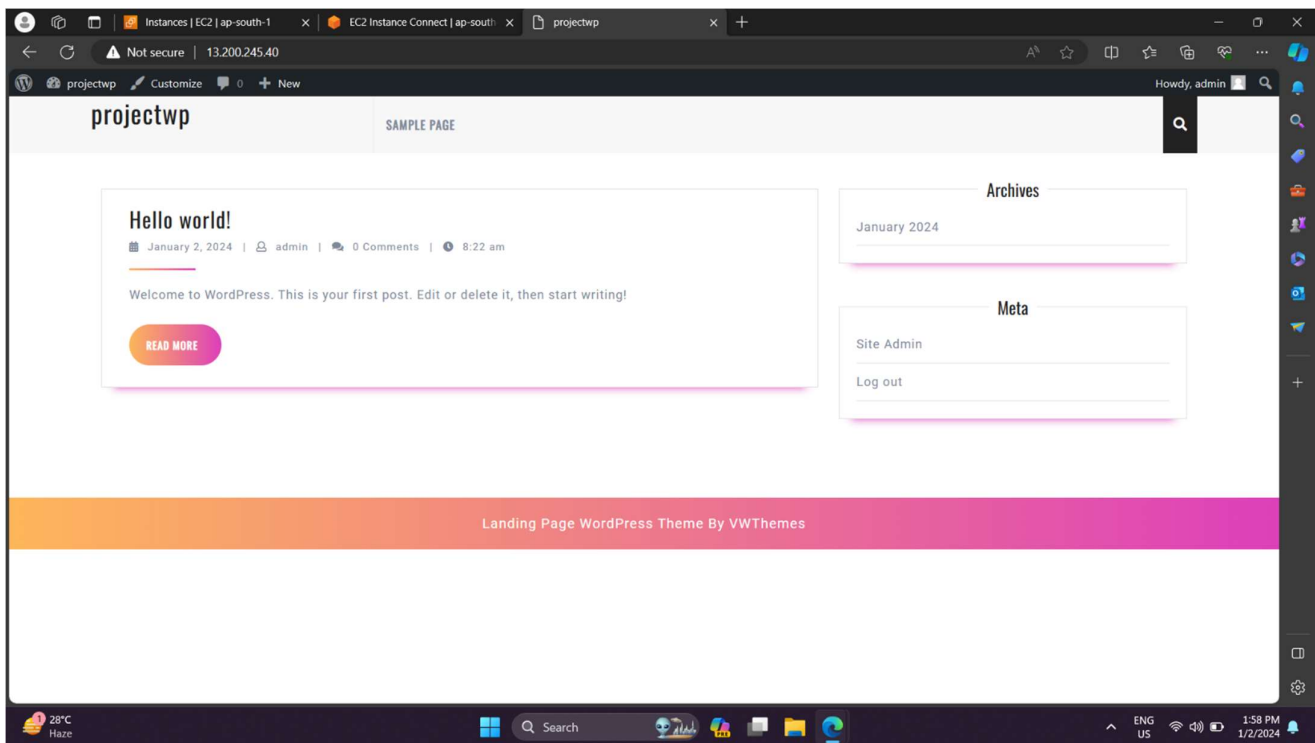

Create user "wpuser" identified by "password";

Grant all privileges on wordpress.* to "wpuser";

10. Deploy Wordpress:

11.Create a Welcome page:

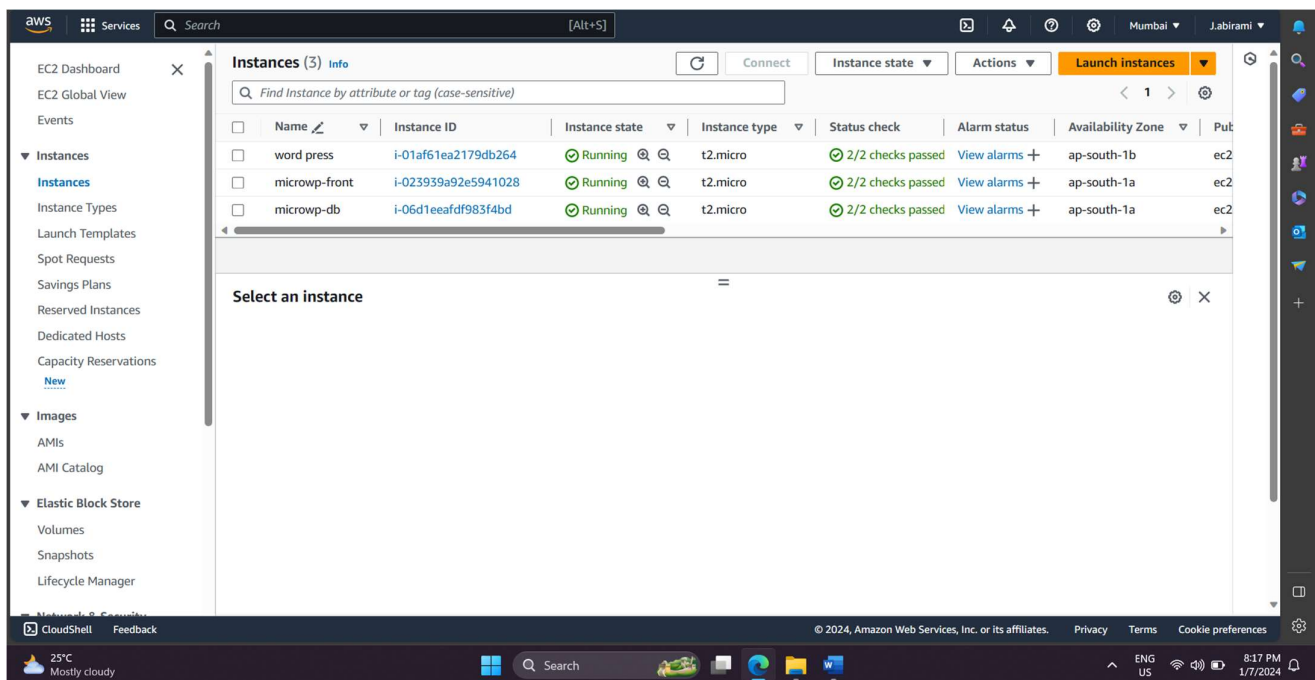

MICROSERVICES:

1. Create 2 EC 2 instances

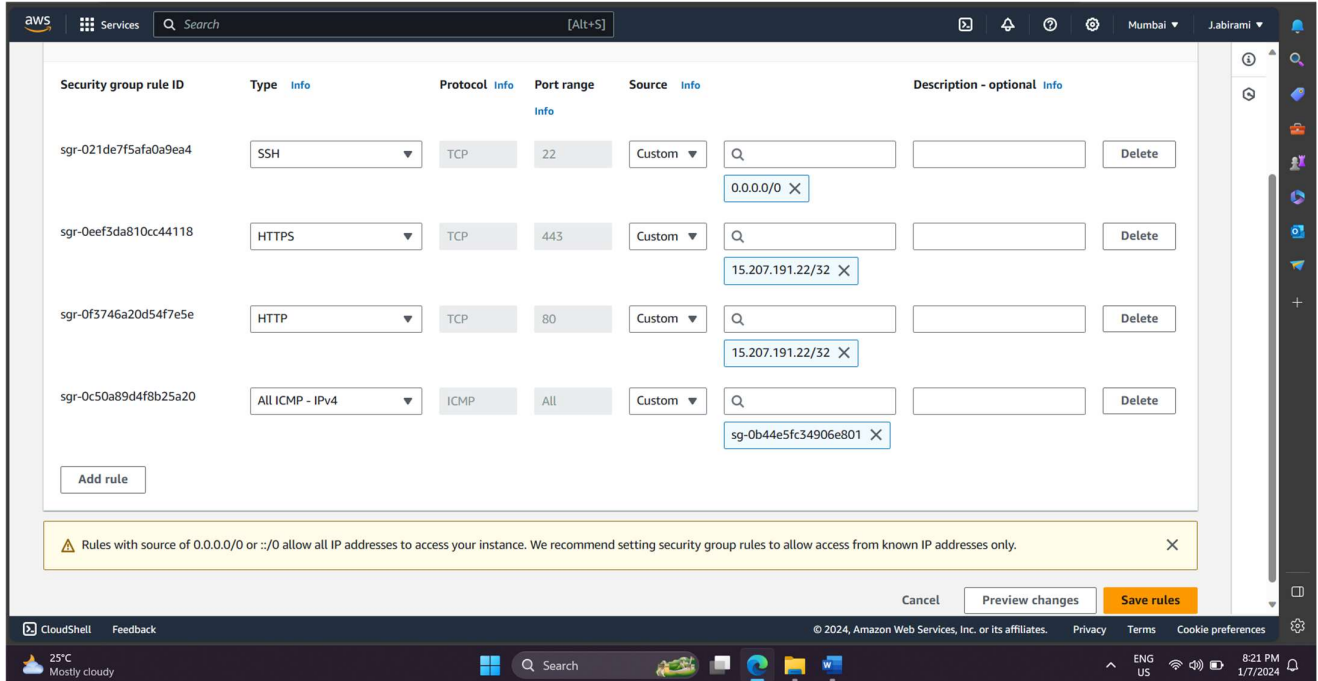

Instance 1: microwp-front

Instance 2: microwp-db

2. Configure security Group:

We configure the security group of both the instances allowing the respective security group by changing the inbound rules.

3. We deploy wordpress on microwp-front instance.
4. We deploy mysql on microwp-db instance.
5. The Wordpress welcome page is deployed in microservices architecture successfully
